Writeup:

The scenario starts with the user being on the Swiggy homepage. The "Given" step sets the initial state where the user is ready to begin the order placement process.

In the following steps (When), the user proceeds with selecting the delivery location. The scenario emphasizes the importance of the first option from the auto-complete box, which indicates an efficient and accurate location selection.

Once the delivery location is set, the user clicks on the first restaurant from the 'Top restaurant chains in Hyderabad' section. This verifies that the system correctly displays the most popular restaurants in the user's selected location.

The next step is to add the first listed dish from the selected restaurant to the cart, ensuring that the ordering process flows smoothly.

After adding the dish, the user hovers over the 'Cart' in the top right corner. This action is usually related to viewing the cart details or accessing the checkout process.

Finally, the user clicks on 'Check Out' in the sub-menu, and the scenario concludes by verifying that the user is prompted with the expected text: 'To place your order now, log in to your existing account or sign up.'

Steps of the Scenario:

A user is on the Swiggy homepage: This step sets the initial state, where the user starts the food ordering journey on Swiggy's homepage.

He sets the delivery location as 'Hyderabad': The user specifies the delivery location, which is crucial for accurate and timely food delivery.

He selects the first option from the auto-complete box: By selecting the first option, the user confirms the desired location accurately.

He clicks on the first restaurant from 'Top restaurant chains in Hyderabad': The user chooses the first restaurant from the popular restaurant chains in the selected location.

He adds the first listed dish to the cart: The user selects the first dish listed in the chosen restaurant and adds it to the cart, preparing to complete the order.

He hovers over the 'Cart' in the top right corner: The user views the cart summary by hovering over the cart icon in the top right corner.

He clicks on 'Check Out' in the sub-menu: The user proceeds to the checkout process by clicking the 'Check Out' option in the sub-menu.

Then he should see the text 'To place your order now, log in to your existing account or sign up.': The scenario concludes by verifying that the user is prompted with the correct text, "To place your order now, log in to your existing account or sign up".
